Bolster AI Social Media Monitoring & Takedown

Stop Scams and Impersonations On Social Platforms

Social media is a powerful tool for engagement—and an equally powerful attack surface for impersonators, scammers, and fraudsters. With Bolster's Social Media Monitoring, you can automatically detect and remove impersonations, fake accounts, and scam content across all major platforms to protect your brand and your customers.

Why Monitor for Fraudulent Websites?

Protect Your Reputation
Fake accounts and scam posts can damage brand credibility and mislead your customers.

Prevent Customer Loss and Confusion
Scams from impersonated accounts result in lost revenue, charge-backs, and customer churn.

Stay Ahead of Evolving Threats
Fraudsters use social platforms to rapidly scale impersonation and phishing campaigns. Without automation, it's impossible to keep up.

Manual Takedowns Are Slow & Tedious
Flagging and removing content manually is inefficient and inconsistent across platforms.

Customers Expect You to Intervene
Brand trust erodes when scam accounts go unaddressed. Consumers now expect real-time protection.

🔑 Key Benefits

AI-Driven Impersonation and Scam Detection
Identify fake accounts, scam posts, and impersonated content using AI trained on billions of brand signals and behavioral patterns.

Real-Time Monitoring Across Platforms
Continuously scan Instagram, Facebook, LinkedIn, Twitter/X, TikTok, YouTube, and other global networks for brand abuse.

Automated Takedown Submissions
Initiate and track takedowns through deep integrations and platform-specific workflows. No forms or manual submissions are needed.

Threat Intelligence and Dashboard Insights
Easily triage, prioritize, and report on brand abuse trends with centralized dashboards and campaign-level visibility.

Campaign Intelligence
Track repeated scam tactics, common fraud themes, and high-impact lures to preempt future threats.

Bolster AI Social Media Monitoring & Takedown

✓ Core Capabilities

Detection of impersonated profiles, scam posts, and malicious comments

Logo, text, and behavioral signal analysis for accurate detection

Automated takedown workflows for supported platforms
